

Hotel Booking Dashboard Summary

This dashboard provides a clear overview of hotel booking performance and customer booking patterns. During the period analyzed, the hotel recorded 119,390 bookings, of which 44,224 were cancelled. The high number of cancellations suggests that understanding the reasons behind cancelled bookings could help improve customer retention and revenue.

In total, the hotels served 234,990 guests, with visitors staying an average of 3.43 nights per booking. The average daily room rate (ADR) was 101.83, giving an indication of the average amount earned per room booked.

The analysis also shows that PRT contributed the highest number of guests, making it the hotel's largest source market. In terms of booking channels, the Online Travel Agent (Online TA) market segment generated the highest number of bookings, emphasizing the growing importance of online platforms in attracting customers.

The dashboard highlights guests who booked with the highest number of children and babies, providing insight into family travel patterns. It also identifies the guest with the highest ADR, showing that some bookings generated significantly higher revenue than the average.

Booking trends across the months reveal noticeable fluctuations, suggesting seasonal changes in customer demand. Lastly, the comparison between City Hotels and Resort Hotels shows how bookings are distributed across both hotel types, helping management understand which category attracts more guests.

Overall, this dashboard helps stakeholders understand booking trends, customer behavior, and business performance. The insights can support better decisions around marketing strategies, pricing, customer retention, and revenue optimization.
